WHAT IS CLAIMED IS:

- A vehicle comprising:
 - a vehicle body;
- a drive system mounted to said vehicle body for contacting a travel surface, whereby rotation of at least a portion of said drive system enables movement of said vehicle body relative the travel surface; and

an internal combustion engine mounted to said vehicle body and coupled with said drive system, said engine comprising a crankshaft mounted in a crankcase, an oil pan detachably coupled with said crankcase, a regulating wall separating first and second side chambers of said oil pan, first and second oil pumps coupled with said crankshaft through a coupling system, said first and second oil pumps being housed in said first side chamber, a first oil inlet port between said first oil pump and said first side chamber, and a second oil inlet port between said second oil pump and said second side chamber.

- The vehicle of Claim 1, wherein said first and second oil pumps protrude below a lower surface of said crankcase.
- The vehicle of Claim 1, wherein said coupling system comprises a pump shaft coupled with said first and second oil pumps.
- The vehicle of Claim 1, wherein said coupling system comprises a chain coupler coupled with said crankshaft.
- The vehicle of Claim 1, wherein said coupling system and said first and second oil pumps are located on a first side of said regulating wall.
- The vehicle of Claim 1, additionally comprising a third oil pump being housed in said first side chamber.
- The vehicle of Claim 1, additionally comprising a third oil pump, said first, second and third oil pumps being driven by a common pump shaft.
- 8. The vehicle of Claim 1, wherein at least one wall of said crankcase separates said crankshaft from said oil pan.
- The vehicle of Claim 1, wherein said vehicle body comprises a saddleriding type seat.
- The vehicle of Claim 1, wherein said vehicle body comprises a steering assembly coupled with one or more skis.
 - 11. The vehicle of Claim 1, wherein said drive system comprises a drive track.

A vehicle comprising:

a vehicle body;

a drive system mounted to said vehicle body for contacting a travel surface; and

an internal combustion engine mounted to said vehicle body and coupled with said drive system, said engine comprising a crankshaft mounted in a crankcase, an oil pan detachably coupled with said crankcase, a regulating wall separating first and second side chambers of said oil pan, and a means for lubricating said engine;

wherein said lubricating means is located in said first side chamber, and wherein said lubricating means draws oil from said first and second side chambers.

- The vehicle of Claim 12, wherein said lubricating means comprises first and second oil pumps.
- The vehicle of Claim 13, wherein said lubricating means additionally comprises a third oil pump.
- The vehicle of Claim 14, wherein said first, second and third oil pumps are driven by a common pump shaft.
- The vehicle of Claim 12, wherein said lubricating means protrudes below a lower surface of said crankcase.
- The vehicle of Claim 12, additionally comprising a coupling system coupling said lubricating means with said crankshaft.
- The vehicle of Claim 17, wherein said coupling system comprises a pump shaft coupled with said lubricating means.
- The vehicle of Claim 17, wherein said coupling system comprises a drive chain coupled with said crankshaft.
- 20. The vehicle of Claim 17, wherein said coupling system and said lubricating means are located on a first side of said regulating wall.
- The vehicle of Claim 12, wherein at least one wall of said crankcase separates said crankshaft from said oil pan.
- The vehicle of Claim 12, wherein said vehicle body comprises a saddleriding type seat.

- 23. The vehicle of Claim 12, wherein said vehicle body comprises a steering assembly coupled with one or more skis.
- 24. The vehicle of Claim 12, wherein said drive system comprises a drive track.
